

## Website Title: Music Store

Project Description: The purpose of this website is to collect, store, and sell music. The website will sort music by author and genre for the customer, and allow artists to upload their own music to sell. It will feature an 'Explore' page, which when clicked, will pick a random song from the database to recommend to the customer. It will also feature a 'Genre' and 'Artist' page that will display a list of genres/artists, which customers could click on to look at songs from said genre/artist. The 'Home' page will feature trending music.

### Website Pages:

- Home - features trending music
- Genres - features a list of genres and a list of music sorted by genre
- Artists - features a list of artists and a list of music sorted by artists
- Explore - displays a random album for the user to sample
- Contact - Contact page for website

Data Description: Each song will have an album, artist, genre, and price; all of which can be used by the website to sort the database. Artists will be able to log in to add and remove their songs/albums.
