Website Name: IP Collector

Description: The purpose of this website is to collect and display the information of site visitors. The website will be hosted on a Virtual Private Server, the code for which will be pulled from my bdshilli.github.io repository. The website will collect information such as IPs, browser information, and device information. It will showcase analytics summarizing the activities of all users who have engaged with the site. Additionally, individual users will be able to access a detailed list of the information the website has gathered from their interactions. The main goal of this project would be to spread awareness regarding the collection of user data by websites.

Pages:

       Home – Provides a description and purpose of the website

       My Info – Provides a list of information the website has collected from the user

       User Locations – Shows a list of where prior users have joined from

       User Internet Service Providers – Shows a list of the most popular user service providers

       User Browsers – Shows a list of the most popular user browsers

Data Storing: The website will have a database of users Ips, locations, internet service providers, and browsers. Only the administrator will be able to delete collected user information.
